From ARK: Evolved Evolved Wiki This article about DLC: Primitive Plus This article is about content available exclusively in the version on Steam, Xbox One, PS4. Primitive Plus (or Primitive) is the free official DLC conversion for ARK: Survival Evolved. THE MOD was originally introduced to Steam Workshop by user complexminded before it was officially released on July 28, 2016 for the PC version of ARK. Primitive Plus is available for Xbox and PlayStation 4. You must have a PS/Xbox Live Gold Membership to enjoy online features. Primitive Plus's sourceediting features improve the gameplay of primitive servers by adding new game mechanics and more than 100 custom primitive elements and their Engrams. Players face the task of using wood and stone in the first place without the advantage of advanced metals. Objects and mechanics focus players on primitive survival. Among the nomennas are three new types of building materials (lumber, glass and brick), as well as new resources, food, weapons, traps, craft stations and decorative structures. Primitive Plus's sourceediting error currently has a few minor errors and a few big mistakes that can be considered a game violation in that they really affect how you can play the game. Usually after new DLC releases or major updates, players have to deal with even bigger bugs, and it takes weeks or months until they are fixed - if they are fixed at all. No, no. The new Kibble system doesn't work for most dinosaurs. With the exception of Karkinos, Giant Bee and Rock Elemental, the new kibble will destroy taming efficiency and will not reduce time. Players still in possession of the old kibble can still use it, but the old kibble can't be created anymore. This prevents players from taming especially herbivores with high tame efficiency. The best way is to use salad (Primitive Plus) and fresh spinach (Primitive Plus), but not every herbivore eats this food and taming efficiency falls quite low. Although the new kibbl can be manufactured and used for breeding, kibble and eggs have no other use. Collecting even rare eggs does not bring any meaningful reward. Long loading time. Players experience a very long loading time when they log on to the server. It seems that the game first downloads the data of the base game, and then reboots them, downloading the data of the PL additionally. Some Engrams don't work. Remarkably, Climbing Pick (Aberration) cannot be created, which has a big impact on the gameplay design of Aberration. You can still use the drawings to work them out or find them as drops on Nameless. Sometimes the ascent makes you killed and your body will be invisible and will not have any inventory or collision. The dining room cannot be manufactured. This error dining facilities that are not available in Primitive Plus. The dining room engram shows no background, but cannot be unlocked. Removing backgrounds through custom server settings has been fixed Error. (Unofficial server) Non-primitive items disappear after the server restarts: you can add engrams or items that are not normally available in the PP by implementing them in Game.ini (if you have access to it, for example, when placing a special Nitradio server). However, all of these items disappear from any inventory after the server restarts. Beeswax (Primitive Plus) is unattainable on many servers, at least on PS4 and Xbox. Different high for different types of structures lumber Texture / Grid bug structure changes the grid /texture after exit to make the distance especially lumber ceiling (Primitive Plus) texture shimmers and hurts in the eyes, so it should not be used. (SOURCE) Supply drops have not spawned (including caves and artifacts) Wildcard have had difficulty tracking this down. Appears to apply to all official servers on all platforms It took a long time, but Wildcard corrected this after the release of Genesis in March 2020. Elements (edit source editing) Resources (edit the source of editing) Expendable consumables (edit source editing) Weapons, Armor and Tools (edit source) Primitive Plus adds the following Weapons, Armor and Tools Structures (edit source editing) Spotlight (edit source) Notes (edit source) Primitive Plus is free to download. Metal structures are disabled in a single-wave mode. However, most Tek structures can be generated and placed. Primitive no is one of the few mods to come to comfort with others, being S , Center, Ragnarok, Valguero and Crystal Islands (as of September 18, 2020) You can not play the Ark of Extinction or Genesis Part 1 in the primitive Changelog edit source Patch Changes 307.59 Fixed a bug that prevents players from seeing primitive servers. Gallery edit edit the source External links edit source Primativ ARK Complete conversion on steam From ARK: Survival Evolution of Vicky This article is a stub. You can help ARK: Survival evolved Vicky by expanding it. This article is about content. available exclusively in the version on Steam, Xbox One, PS4. This article is about content exclusively for DLC: Primitive Plus Cooking Station is a structure in Primitive-DLC ARK: Survival Evolved. Crafting edit source requires flour, organic oil, salt, cane sugar, cornstarch, natural yeast, cashew milk, soy milk, tomatoes, for use in various engram recipes. The cooking station can be used to create the following elements of the engram recipe: Requires cooked poultry, cooked rice, cooked fillet, bread, cooked prime meat, lettuce or spinach in a variety of hidden recipes. Culinary station can be to create the following hidden elements of the recipe: Chicken and Rice Fillet and Bread Prime Salad Notes (edited source editing) ARK: Survival Developed by the zgt; General Discussion of the Primitive 101s (As It Uses) It was Ralx originally has ARK: Survival Evolved October 8, 2015 9:23 p.m., and I'm reviving it because of how many people are confused by the lack of updates. Please help me get this update update the latest information now that his official. Ask your questions about primitive plus and others will answer, and then I'll edit and update this main post. Allows you to continue to add and update this, since wiki sucks very poorly for information about prim sometimes. Lately I've seen people asking how to do this or that in The Primitive TC, so I decided to help Ced out some, going through and putting the list together. If something is not on the list, feel free to ask about it and I will update the thread a day or earlier. Again this list will start small simply because I'm not sure that people have problem-making etc.----- How ----- Skin is made in a tanning rack with salt and hide, It just takes a very long time and produces 15 at a time. Glass - 2 pearls and 5 crystals in ForgeBrick - (Obsidian Peak needed to collect stone knots and metal knots) Obs Pick v Stone Network you Claystone. Obs Pick v Metal Nets you limestone. 20 clay stone and 10 limestone in a handmade mill gets you a bucket of clay. Then take the clay into the forge and heat it, Bam bricks! Brick and cement are stronger than stone. The brick walls appear to be 10,000 units stronger than the stone so 20,000 units. Cement is a stronger base and ceiling as well. The obsidian peak is made in SmithyLumber stronger than thatch and wood, but no stronger than stone and cement. Bees - Honey (1 Queen Bee - 1 Unmanned Bee - 30 sec. 50 Workers. 5 Workers - 1 Honey (5min)) They must be placed inside the apiary. You collect bees, you collect berries. Dinos can also capture them. (Next update should fix this) Honey should tame the bears on one of the last patches. Needs testing though to confirm. Carbon and steel - Carbon comes from obsidian nodes. (Use Obsidian choice on it). To make steel bars, you take 3 irons and 3 carbons and place them in the forge! (next update should fix carbon) Salt - Crystal in Handmill.Sugar Press - As far as I understand, you just leave an item inside it and will work yourself. (Never messed with it, so I can't confirm!) -----Im -----Kibble / Cooking Rec. - Although I won't go through the details of cooking kibble, just because you can watch them through Google. I will mention that the boiler (a primitive item) can be used to cook Kibble and Normal Ark Cooking Rec. (More tips, but it works!) Fat - Fat is used to make organic oil on a campfire, campfire, or grill. The oil is currently used only as a fuel source used in lamps. (I can't remember if it was ever changed to work on the grill.) ----Besons---- Seeded, added through TC/Mod, must be found in lighthouses. (I think there was a problem with them in the 10/7 update, so wait to check with Ced on this Rice, lettuce, kesya, wheat, coffee, tea, sugar, barley, grapes, tobacco, latex tree, bread tree all come from different tiers of lighthouse. Now, it seems most seeds can also be harvested (Let me know if any of these on this list have not been found in the game!) the last edited by Ralx; November 3, 2015 8:32am 8:32am CHAOTIC ENOGMA 6-2-2016Syi is currently found in conventional shrubs and plants as well. How to dry tobacco/barley/wheat/etc - Place tobacco in a retaining hut with sparkpowder. It's going to dry up overtime. Malt is made from dry barley and mixing it with water in the boiler. Malt is clearly used to create alcoholic beverages. The maud blacksmith is being auditioned for 6-2-16 and is not working. Use a classic cousin. The axe is currently being tapped by phone 6-2-16. Don't use it. Fresh meat from killing dodo can be used to tame most carnivores. Crops such as wheat or cane sugar can be used to tame herbivores as well as honey for bears. Last edited by CHAOTIC ENIGMA; July 29, 2016 - Note to 7:44 p.m.: This is the only thing you can use to report spam, advertising, and problematic (harassment, fights, or rude) posts.
